

A Fresh Look for Listing Load on RMLSweb and Other Improvements Coming February 5th

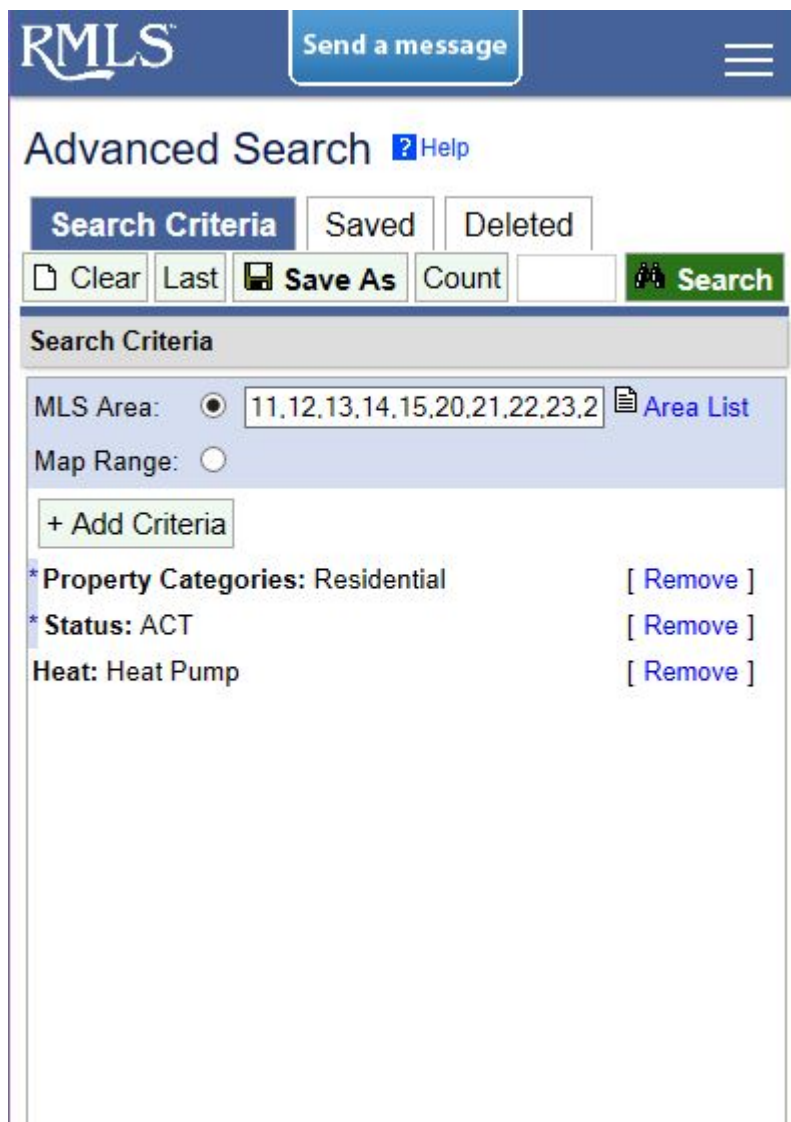

RMLS™ is polishing up a round of improvements to RMLSweb set to make their debut on February 5th. Among these is a bold new look for Listing Load, more responsive design for search functions, and easier listing edits.

Tile View, a new look available to users in Listing Load, will feature large icons. Status, price, and other details may be

easily edited by clicking on icons and/or text. Listing view counts can also be accessed through this interface. My Inventory has also been added as a tab in Tile View and List View, although access remains through the Back Office menu anywhere in RMLWeb.

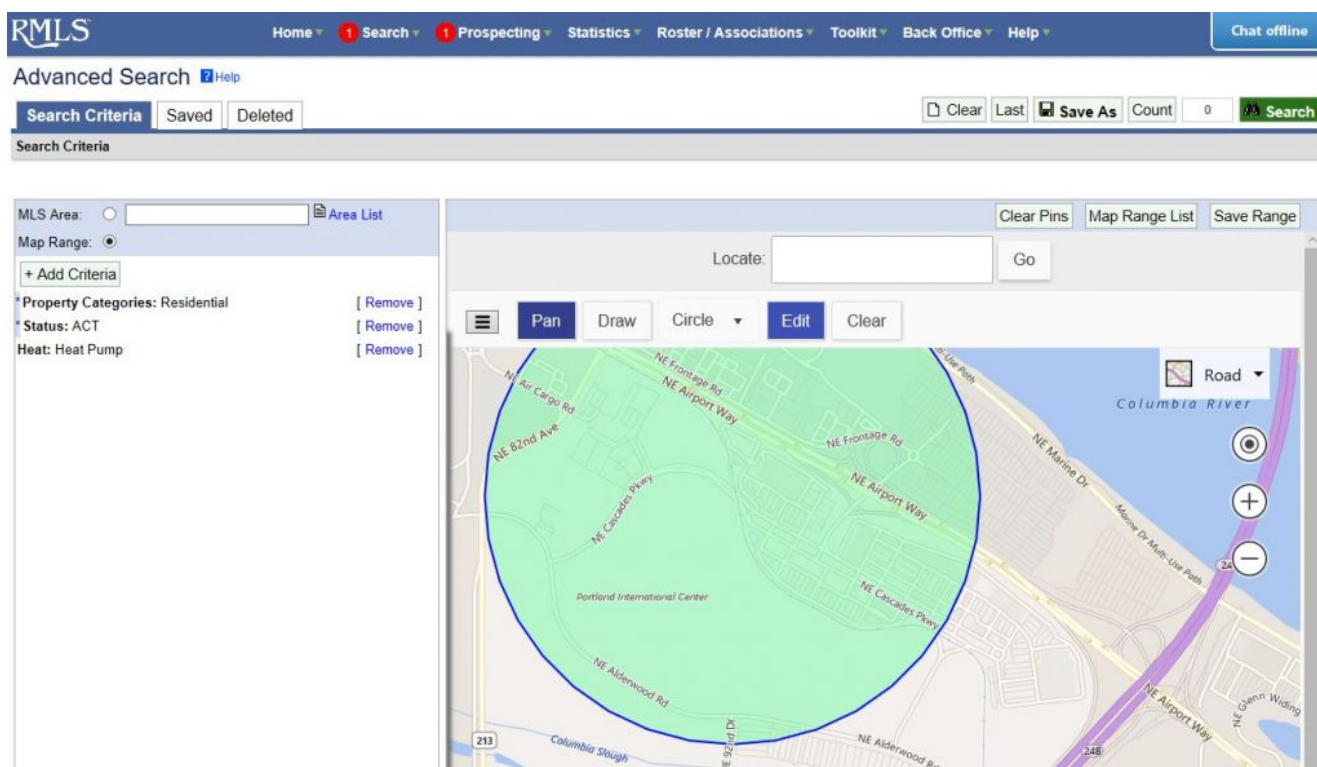

In addition to Listing Load's easier interface, RMLS™ has also reworked the search pages on RMLWeb to be responsive to a user's browser. This means that users on a mobile device will find the search options easier to use.

The screenshot displays the RMLS Advanced Search interface. At the top, there is a blue header with the RMLS logo, a "Send a message" button, and a hamburger menu icon. Below the header, the page title is "Advanced Search" with a help link. The interface includes several tabs: "Search Criteria" (active), "Saved", and "Deleted". Below the tabs are buttons for "Clear", "Last", "Save As", "Count", and "Search". The "Search Criteria" section is expanded, showing a list of criteria: "MLS Area" (selected: 11,12,13,14,15,20,21,22,23,2), "Map Range", "+ Add Criteria", "* Property Categories: Residential", "* Status: ACT", and "Heat: Heat Pump". Each criterion has a "[Remove]" link next to it. An "Area List" link is also visible next to the MLS Area selection.

Subscribers can use this increased responsivity to easily make

changes in the field. Listings with an accepted offer, for example, may be changed *instantly*—well within the 24 hour time window required for changing a listing’s status in RMLSweb. Furthermore, users who have had difficulty navigating RMLSweb using a mobile device or a regular browser set at less than full screen should have an easier experience when using the site.

Because these search pages have been reworked, users will also notice some layout changes on searches. When switching to Map View on Advanced Search, for example, will push the search criteria over to a left sidebar so users may see the map and criteria all on one screen.

The majority of these changes are a direct result of subscriber feedback, including Listing Load focus groups held over the last several months by Beth Raimer, our new product manager. If you’re interested in participating in future focus groups, [contact Beth Raimer directly](#). We especially encourage

REALTORS® from outside the Portland metro area to participate!
