RMLS™ Mobile offers subscribers access to listings, photos, showing information, days on market information—all listing information available on RMLSweb! Using the app, REALTORS® may call or email the seller's broker immediately and even text listings to clients.

Searching for nearby listings is a snap with RMLS™ Mobile—the app uses location data to target the neighborhood where the device is located. Listings may be shown in either list view (above) or map view (below).

Download RMLS™ Mobile today on the [Apple App Store](#) or [Google Play](#)! The app will be updated frequently to add new features, fix bugs, and improve performance, so you'll want to update the app whenever a new version is released.

RMLS™ Mobile is *exclusively* for RMLS™ subscribers. It was built in response to feedback from subscribers, co-developed with Utah Real Estate as part of [MLS Aligned](#).
