

Understanding Appraisals and BPOs (Gresham)

This course covers the residential appraisal process, giving the REALTOR® a look into the mind and thought process of the appraiser, and the regulations appraisers need to adhere to. A residential BPO model will be presented to REALTORS® that attend the class. This BPO model is a whole and complete market price estimating software that is modeled after the residential appraisal process that appraisers follow. This software, SmartBPO, is free to all REALTORS® who attend the course and learn how to use it. This class is worth 3 CE credits in both Oregon and Washington.
