DataMaster Appraiser Program Now Available to RMLS™ Subscribers

RMLS™ subscribers may now purchase the appraisal program DataMaster for use with RMLS™ data. DataMaster is a desktop application that imports MLS data from RMLS™ and public records data from another source. The data is combined into an appraiser's existing appraisal software in order to quickly create an accurate 1004MC report.

DataMaster aims to increase an appraiser's productivity by offering automatic importing, accuracy, and creating a 1004MC report in seconds. The software allows for custom formatting, and is UAD compliant.

Visit the DataMaster website for more information about the product, or to download a free 14-day trial.
